Election/Restrictions

1. This application contains claims directed to more than one species of the generic invention. These species are deemed to lack unity of invention because they are not so linked as to form a single general inventive concept under PCT Rule 13.1.

The species are as follows:

Species I: Figures 1-7, 11 and 12

Species II: Figures 8-10

Applicant is required, in reply to this action, to elect a single species to which the claims shall be restricted if no generic claim is finally held to be allowable. The reply must also identify the claims readable on the elected species, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered non-responsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

2. The claims are deemed to correspond to the species listed above in the following manner:

Species I: Claims 1-7

Species II: Claims 8-11

The following claim(s) are generic: Claim 1 and Claim 8.

Art Unit: 3609

3. The species listed above do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, the species lack the same or corresponding special technical features for the following reasons: Within Species I the device is used to hold rotatably mounted parts (3 and 5) in certain stored positions and to prevent return or over rotation of these parts (3 and 5). The bolt (9) is moved into position through the interaction of pin (24) with the control device (10) when the rotatably mounted part is put in a stored position. Species II relates to a device to hold divided seat backs (29.1 and 29.2) in a use position and to allow separation and return of these parts (29.1 and 29.2). The bolt (9) and pin (24) interaction is reverse when the segments (29.1 and 29.2) are moved in Species II. The examiner has found prior art with individual intended use that relate to each Species individually.

4. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kaitlin A. Wilson whose telephone number is (571)-270-3206. The examiner can normally be reached on Monday - Friday (7:00am-4:30pm).
